🛡 Prevention Techniques

- **Elastic Weight Consolidation (EWC):** Protect important parameters
- **L2 Regularization:** Stay close to pre-trained weights
- **Replay Buffer:** Mix old and new data (10-20% ratio)
- **Knowledge Distillation:** Maintain original model behavior

📊 Monitoring Strategy

- Track performance on general medical benchmarks

- Measure forgetting rate: $\Delta = Acc\_initial - Acc\_final$

- Set threshold: Stop if forgetting > 5%

- Periodic evaluation on held-out general tasks
